

Hi,

My name is Cristin Scali, I'm 51 years old and I'm from Long Island, New York.

I was diagnosed with renal artery FMD December 2017 after suffering two years with undiagnosed symptoms. My nephrologist had me take every test possible and finally figured out it must be FMD. I was both relieved and sad at the same time not knowing what was to come in the future for me. But he found me a wonderful cardiologist and the two of them made up a plan and three days later I had bilateral renal angioplasty. If it wasn't for Dr. Barbato and Dr. Deutsch I never would've known what truly was wrong with me. But now that I know what I have and found your wonderful FMD society "club" 🥰 I can spread the word. Having all the valuable information on the disease and what tests to take is so helpful. Thank you for all you do and good luck to all my fellow FMD patients!
